**Odessa Branch Office Expands to New Location**

ODESSA, TEXAS, OCTOBER 15, 2002 - Compressor Engineering Corporation (CECO) opened the expansion of its Precision Repair facilities in Odessa, Texas. The 20,000 square foot facility resides at 6900 North County Road West.

The shop employs a local staff of precision machinists, office administrators, sales representatives and more. An additional 5,000 square feet of office and warehouse space houses a full team of local technical and service support staff. Randy Alford, Sales Manager, works closely with both of CECO's Senior Sales Representatives, Mike Blau and Earl Pinson, to provide the most personal and knowledgeable service to their customers.

"The new office space is phenomenal," says Alford. "We have room to expand and that's what we plan to do. With all the working years' experience in our sales force and the Precision Repair Center staff, along with the Houston engineering staff, there are few problems that we cannot solve."

"Our focus is on precision repair of connecting rods, cylinders, crossheads, piston rods, valves, oil pumps and water pumps as well as complete compressor overhauls," said Nolan Vicknair, Manager of Compressor Engineering's Precision Repair Center.

An Open House was held at the new facility during the Permian Basin Oil Show in October. Over 100 customers attended and were given a tour of the facility and grounds.

CECO, headquartered in Houston, was founded in 1964 to provide a quality line of compressor and gas engine parts. In 1977, CECO opened a branch office in New Orleans, and added a warehouse and sales office in Odessa in 1980. The new facility greatly expands the capabilities of the Odessa Precision Repair Center, which originally opened in 1989.
